Subject: CETECH Full-Stack NestJS Developer

Dear Hiring Team at CETECH Ghana,

I am eager to bring my expertise in full-stack development to CETECH Ghana as a Full-Stack (NestJS & Next.js) Developer. With extensive experience in NestJS, Next.js, TypeScript, and PostgreSQL, I specialize in building scalable, production-ready systems that transform ideas into impactful digital experiences. CETECH's vision of merging research, education, and community aligns perfectly with my passion for creating technology that empowers professionals.

Currently, I work remotely with RadComm Group, developing SaaS and CMS platforms using Next.js, NestJS, Auth0, Docker, and CI/CD pipelines. I have built a Next.js + Sanity CMS with AI-powered publishing workflows and a B2B event management platform that automates client onboarding and registration, honing my ability to deliver high-quality, business-aligned solutions.

At Coziza, I developed a NestJS AI Agent API powered by LangGraph and GraphQL, improving data retrieval accuracy and conversational user experiences. I also built a Next.js admin dashboard with passwordless authentication and modular architecture, streamlining property management workflows.

Beyond my professional experience, I founded WashAm, a laundry delivery startup I initially ran manually to validate market needs before implementing a WhatsApp AI booking system. This venture reflects my entrepreneurial mindset and skill in translating practical user experiences into technology solutions.

CETECH's mission resonates deeply with me. Your goal of empowering professionals through an integrated platform for learning, collaboration, and monetization aligns seamlessly with my vision for purposeful technology. While my current role at RadComm is remote, I am fully prepared to transition on-site at CETECH Ghana.

My expected monthly salary is ₵10,000 GHS, and I am available to start immediately. I look forward to contributing to CETECH Ghana's ambitious mission to redefine digital knowledge sharing.
